

What is Amarin doing to ensure patients prescriptions are filled while generics have limited supply of product?

Amarin is reaching out to industry participants to ensure they are aware that branded VASCEPA® (icosapent ethyl) remains available at pharmacies nationwide with a reliable supply chain of product to fill prescriptions as needed and that VASCEPA remains in a position of favorable coverage by most insurance plans. Amarin is aware of various patient care focused websites, including some by pharmacies, which appear to have made errors in citing the indications for branded and generic icosapent ethyl. Amarin is actively reaching out to the sponsors of such websites seeking corrections and investigating potential corrections needed for any pharmacy systems beyond their websites.
